Visit Summary

2 minutes

Mesut Celik, a male with history of angiodopathy, presented for evaluation after his Apple Watch detected heart abnormalities. His medical history includes slight circumflex artery stenosis confirmed by previous angiography. Examination revealed sinus rhythm at 70 bpm with one ventricular extrasystole. Echocardiography showed normal left ventricular ejection fraction with mild mitral regurgitation. Treatment continued with aspirin and Atacand Plus for hypertension management.

Subjective

MESUT CELIK presents for a general check-up, prompted by concerns about his heart detected by his Apple device. The patient has a history of angiodopathy and reports using blood thinners and occasionally aspirin.

Mr. CELIK states that his Apple device alerted him to potential heart problems, which led to his current visit. He provided screen records showing a heart rate of 70 beats per minute in sinus rhythm, with one ventricular extrasystole noted. The patient mentions a history of angiodopathy but is unsure about any specific vascular diseases. He currently takes aspirin and a blood pressure medication (atacant-pulis) as part of his treatment regimen.

The patient's ability to recall his medications is limited, relying on a list for accurate information. This suggests potential issues with medication adherence or understanding of his current treatment plan. Mr. CELIK does not report any specific symptoms or complaints during this visit, indicating that this is primarily a follow-up based on the device alert rather than new or worsening symptoms.

Medical History

- Angiodopathy (previous occurrence)

- Slight tightness in the circumflex artery (based on angiography)

Surgical History

- Angiography (date not specified)

Medications and Supplements

- Aspirin

- Blood thinner

- Atacand Plus (tension medicine)

Social History

- Substance Use: Occasional aspirin use

Review of Systems

Cardiovascular: Positive for ventricular extrasystole.

Objective

Vital Signs

- Heart Rate: 70 bpm, sinus rhythm

Laboratory, Imaging, and Diagnostic Test Results

- Apple Watch ECG:

- Heart rate: 70 bpm

- Rhythm: Sinus rhythm

- One ventricular extrasystole noted

- Angiography:

- Slight stenosis in the circumflex artery

- Echocardiography:

- Left ventricular ejection fraction: Normal

- Mitral valve: Slight regurgitation

Assessment & Plan

MESUT CELIK, male patient with history of angiodopathy, presents for general check-up due to Apple Watch indicating heart problems.

Cardiac Arrhythmia

Assessment: Patient reports Apple Watch detected heart problems. ECG screen records show heart rate of 70 bpm in sinus rhythm with one ventricular extrasystole. Patient has a history of angiodopathy. Angiography reveals slight stenosis in the circumflex artery. Echocardiography demonstrates normal left ventricular ejection fraction with mild mitral regurgitation.

Plan:

- Continue aspirin (dose and frequency not specified)

- Continue atacand plus (dose and frequency not specified) for hypertension management

- Performed echocardiography during visit

Patient Instructions

Dear MESUT CELIK,

Thank you for visiting today. Here is a summary of the key instructions:

Medications:

- Continue taking aspirin as prescribed

- Continue taking atacant-pulis for blood pressure

Tests:

- Echocardiography was performed

Follow-up:

- Continue monitoring heart rate and rhythm

Please reach out if you have any questions or concerns.

Best Regards,

Muhammet Uyanik, MD

Transcript Summary

Hello. What is your complaint? Why did you come? Today I came for a general check-up. Apple told me there were some problems with my heart. Did you get a screen record? Yes, I have screen records. Can I look? Yes, let me show you my screen records. Here, heart rate is at 70 per minute, in sinus rhythm. I have one ventricular extract. Is there a medicine you use? I use a blood thinner. Sometimes I use aspirin. Have you ever had angiodopathy before? I've had angiodopathy before. Did any disease occur in the veins? As far as I know, it didn't occur, but you can look at these results. I'm looking at angiography. There is a slight tightness in the circumflex artery. Do you know your medicines? Can you tell me their names? I think you can look at the list here. I don't remember their names exactly. Please look at the list. There is aspirin. There is tension medicine, Atacand Plus. Let's do echocardiography. In your echocardiography, there is slight regurgitation in the normal mitral valve of the left ventricular ejection fraction. Very good. Thank you. We will continue from here.
